

EDORA, ODE and BOP's Feedback on the Belgian National Energy and Climate Plan (NECP)

15 maart 2019

Preliminary remarks:

- This constitutes the contribution of the Belgian renewable energy federations (hereafter: BREF) ODE (Flanders), EDORA (Wallonia and Brussels) and BOP (Belgian offshore platform) to the draft Belgian NECP published on December 31, 2018.
- The messages of this contribution are common for the three federations. More specific contributions to the regional plans will be delivered later separately to Flanders, Wallonia and Brussels.
- This contribution is based on the objectives and content of the Clean energy package for all Europeans. No specific consideration is made about the sufficiency of European climate, RES and Energy efficiency targets with respect to the Paris agreement. BREF has already questioned the European renewable energy target for 2030 as insufficient to comply with the Paris climate agreement.
