

Energy towards 2025: Innovations that will power the future

30-04-2019 Brussels

Energy toward 2025 Innovations that will power the future

28 maart 2019

On the eve of the elections of May 26 climate change has risen to the top of the deciding issues. Most everyone agrees a **transition to a sustainable energy system** will be essential to keeping climate change at acceptable levels.

But how do we get there?

A **coalition of energy and environmental federations** gives the floor to the energy experts of the main political parties. We want to know what their solutions are to shift the balance, what we can expect from them in the next five years, and what their long-term projects are. Join us for a deep dive into energy policy and visions.

The **political panel** will lead into a **seminar** on one of the hottest current energy policy proposals: **the Capacity Remuneration Mechanism or CRM**, intended to ensure **electricity supply in Belgium after the nuclear power plants close in 2025**.
